

VINOD VARDARAM

Full-Stack Engineer • +91 8310143883 • Bangalore, IN
kalki.the.dev@gmail.com • linkedin.com/in/kalkikal • github.com/VINODvoid

Summary

Full-stack engineer (TypeScript/Node.js, React/Next.js, PostgreSQL) who designs and ships systems end-to-end. Cut API latency 30% via Postgres query profiling and connection pooling; builds around reliability constraints – HMAC-verified async webhooks, bounded concurrency, durable retries. Merged open-source contributions to Discord's Osprey and Mastra.

Experience

Independent Software Engineer

August 2025 – Present

Open source & self-directed projects

Remote

- Designed, built, and shipped systems solo, design to deployment (see Projects): a GitHub App review backend with 431 tests, a TypeScript SDK published to npm, and a mobile app shipped as an APK in 3 weeks
- Osprey** (Discord's trust & safety rules engine, used by Discord, Bluesky, Matrix.org): 3 merged PRs, incl. Kafka topic retention limits to prevent unbounded disk growth
- Mastra** (TypeScript AI agent framework): merged a fix routing observability pricing lookups through the configured model instead of a hardcoded default

Software Development Intern

Dec 2024 – Jul 2025

Pentagon Space

Bangalore, IN

- Profiled PostgreSQL query execution plans and implemented connection pooling – reduced API response time 30% under production load
- Built Node.js/Express REST APIs with JWT authentication middleware, input validation, and schema design; shipped through peer code review

Machine Learning Intern, *Intervie Tech* – +15% model accuracy; served via Flask REST API

Nov – Dec 2023

Projects

REEVE - Concurrent PR Review Backend

github.com/VINODvoid/review-agent

Python, FastAPI, GitHub Apps, asyncio, GitPython, pytest

2026

- GitHub App backend: HMAC-verified webhook returns 202 immediately, then a background worker checks the PR out into an isolated git worktree and runs four specialised reviewers over the diff under bounded concurrency
- Diff is pre-numbered and off-diff findings dropped locally, since one out-of-range line makes GitHub reject an entire review; findings deduplicated per line, with cross-reviewer corroboration ranking what gets published
- Built a precision/recall eval harness with planted defects and known-clean lines – found 6/6 defective modules in 72 calls, zero failures, ~44s; 431 tests, and a new reviewer touches only three files

Lumos - Durable Workflow Orchestration Engine

github.com/VINODvoid/lumos

TypeScript, Next.js, React, tRPC, Inngest, PostgreSQL

2024

- Full-stack workflow builder: Next.js/React UI over a tRPC API; each step independently retried and state checkpointed in PostgreSQL, so failures are isolated without losing progress; per-step execution traces shown in the UI

Sigil - Identity & Scoped-Permission Layer for AI Agents

github.com/sigil-xyz/sigil

Next.js, TypeScript SDK, Anchor (Rust), Helius, PostgreSQL

2026

- Capability scoping, per-transaction and daily spend limits, and trust scores checked before any agent action executes – built solo for Colosseum Frontier
- Next.js dashboard with Privy auth and real-time event indexing via Helius webhooks into PostgreSQL; modular TypeScript SDK published to npm

Also: Cortex – 10-agent consensus system, WebSocket-streamed to React Native, shipped solo in 3 weeks (github);

Reflex – Go + PostgreSQL cross-chain position monitor with queue-isolated alert workers and push notifications.

Technical Skills

Languages & Frontend: TypeScript, JavaScript, Python, Go, SQL, Rust; React, Next.js, React Native

Backend: Node.js, Express, tRPC, REST, WebSockets, FastAPI, webhooks (HMAC), BullMQ, Inngest, JWT, RBAC

Databases: PostgreSQL (query profiling, schema design, connection pooling), MongoDB, Redis, SQLite, Prisma

Testing, Infra & AI: pytest, eval harnesses, Docker, AWS (EC2/S3), Vercel, Linux, Git; LLM APIs (Anthropic, OpenAI, Groq)

Education

Brindavan College of Engineering, Bangalore – B.Tech Computer Science, CGPA 8.1/10

2021 – 2025
